! Should Fix:

### Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 4 blocking script resources and 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

### Consider Fixing:

#### Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

## Mobile

[Leverage browser caching](#) for the following cacheable resources:

- <https://www.google.com/recaptcha/api.js> (5 minutes)
- <https://www.google.com/recaptcha/api2/webworker.js?hl=en&v=v1563777128698> (5 minutes)

## Reduce server response time

In our test, your server responded in 0.23 seconds.

There are many factors that can slow down your server response time. [Please read our recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

## Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

[Minify CSS](#) for the following resources to reduce their size by 4KiB (21% reduction).

- Minifying <https://domainstats.com/static/domainstats/css/theme.css?v=1565941999> could save 4KiB (21% reduction) after compression.
